CD-Chex CD117[®] Plus

CD-Chex CD117 Plus is a ready-to-use control for evaluating surface antigens, including CD117, CD25 and CD71, with monoclonal antibody binding by flow cytometry. It was developed with characteristics similar to abnormal peripheral blood leukocytes often found in a hematolymphoid neoplastic patient sample. It is a positive procedural control that provides assay values for abnormal and total leukocytes. CD-Chex CD117 Plus is compatible with BD Biosciences and Beckman Coulter flow cytometry systems.

Features

- + Only commercially available control assayed for CD117, CD25 and CD71
- + Exhibits characteristics similar to an abnormal peripheral blood patient sample
- + Provides assay values for abnormal and total leukocytes
- + Compatible with BD Biosciences and Beckman Coulter flow cytometry systems
- + 30-day open-vial stability
- + 90-day closed-vial stability

Benefits

- + Helps meet quality requirements for leukemia and lymphoma immunophenotyping
- + Established assay ranges provide less room for error
- + Reduces the need for labs to hold and validate patient samples for use as a control
- + Access to *STATS*[®], a free interlaboratory quality control program with peer group data comparison and online submission
